

## Monitoring of iron in whole blood donors at Sanquin Blood Bank

M.G.J. van Kraaij, MD PhD

Hematologist – Transfusion Medicine Specialist

Director Dept. Donor Affairs and Transfusion Medicine  
Sanquin Blood Bank, the Netherlands

[m.vankraaij@sanquin.nl](mailto:m.vankraaij@sanquin.nl)

# Whole blood donation and iron loss

# Whole blood donation

Primum non nocere – First, do no harm  
-> iron deficiency

## Donors donate iron

One whole blood donation =  
250 mg iron

Yearly: 1000 mg

After 100 donations: 25 gram

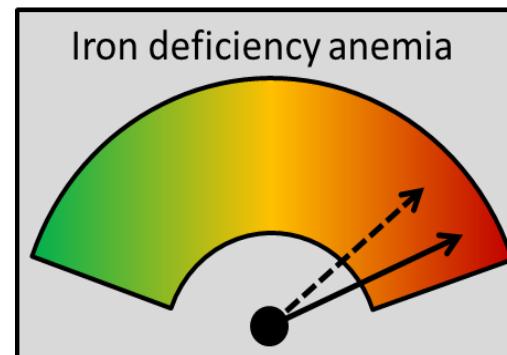

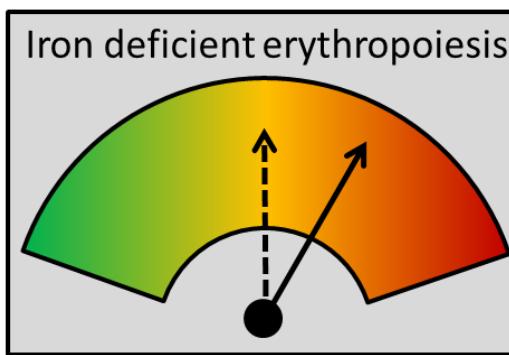

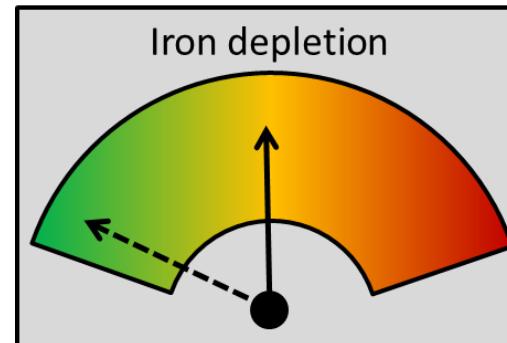

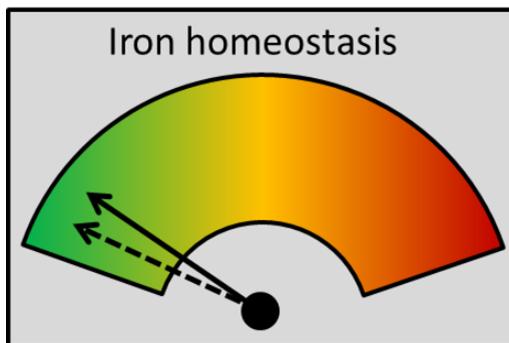

# Iron replenishment

- Mean iron intake: 15-20 mg/day
- Mean iron absorption: 1-2 mg/day

Average iron stores: 250 mg in women and 1000 mg in men

## Iron depletion

↑  
Iron stores  
  
↑  
Hemoglobin

## Potential effects of iron depletion/ deficiency

- Anaemia
- Fatigue
- Pica (craving for eating non-nutritive substances)
- Restless legs syndrome
- Impaired (neuro)cognitive development, especially teenagers/ fetuses

## Current practice at Sanquin

## Guidelines whole blood donation Sanquin Blood Bank

- Donation volume: 500 ml
- Male: 56 days between whole blood donations
- Female: 122 days between whole blood donations
- Frequency
  - Male: 5 times a year
  - Female: 3 times a year
- Hemoglobin (Hb) thresholds:
  - Male: 8.4 mmol/L (13.5 g/dl)
  - Female: 7.8 mmol/L (12.6 g/dl)

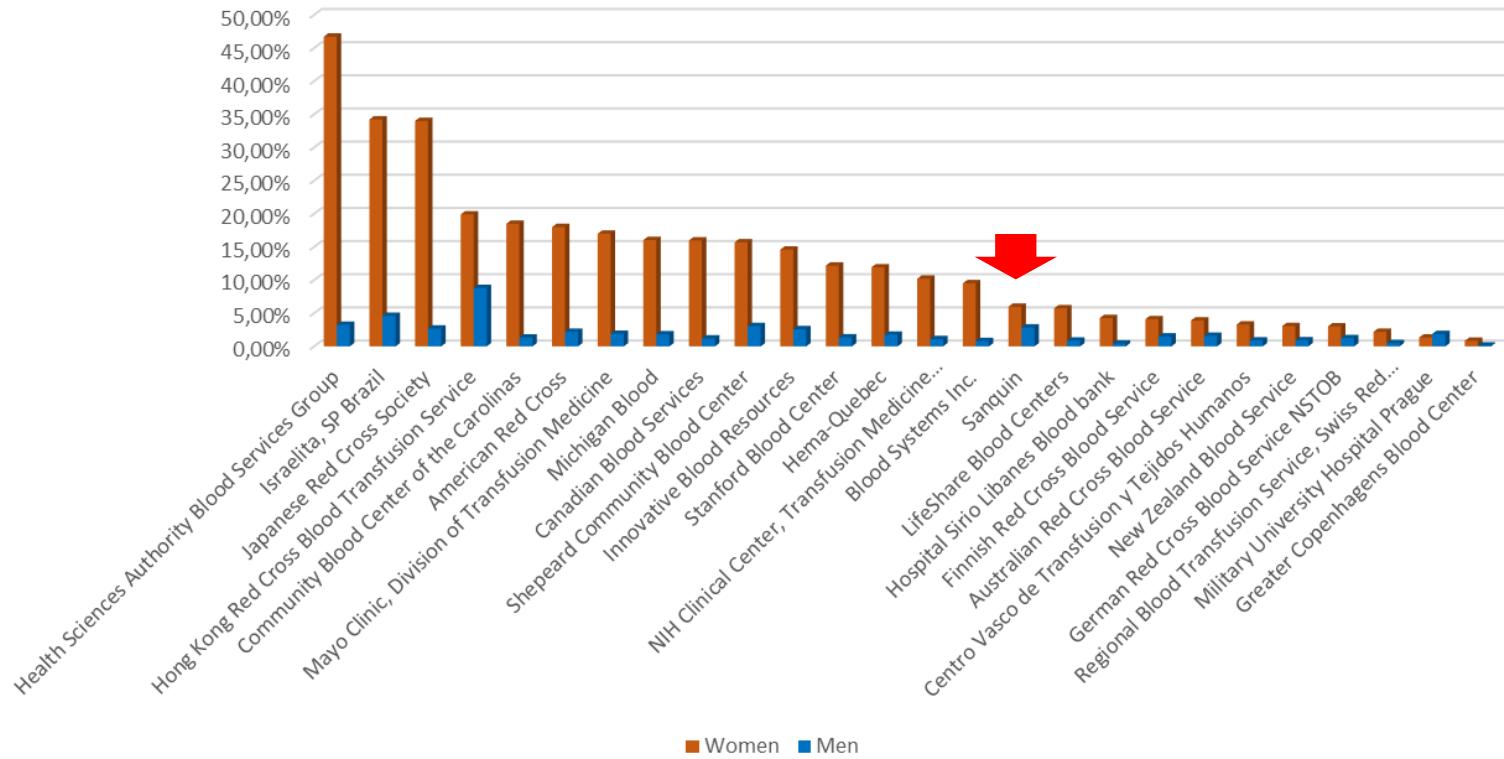

## Donors deferred for low Hemoglobin (mmol/L)

	Hb cut-off (mmol/L)	Number of donation attempts	Number of Hb deferrals	%
Male	< 13.5 g/dl	262,557	7,486	2.9%
Female	< 12.6 g/dl	228,589	13,654	6.0%
				1/1/14 – 31/12/14

# International deferral percentages low Hb

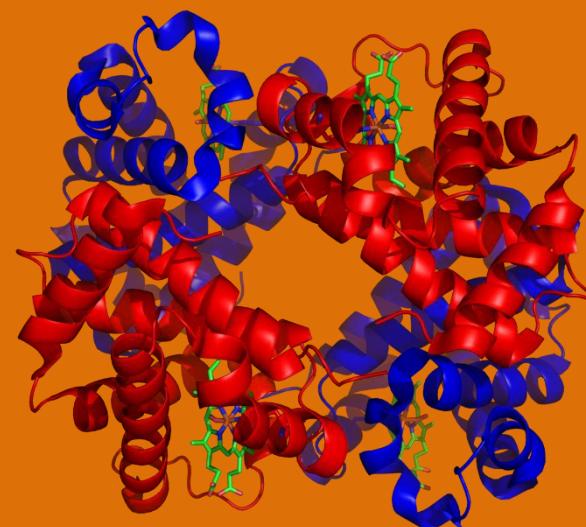

**DEFERRAL RATES DUE TO LOW HB/IRON STATUS 2014**

# New donors mainly females in the Netherlands

# Research on Hb deferral and iron in whole blood donors

## Extension of donation intervals

- Longer donation intervals – lower Hb deferral rates\*
- Extension of donation intervals in donors at risk effective (submitted)
- Ferritin-guided donation intervals more effective?
  - Odds ratios Hb deferral for ferritin  $\leq 30$  vs  $>60$  ng/ml: 11,8 and 2,7 (M and F, respectively)\*\*

\*Baart et al. Transfusion 2015

\*\*Prinsze et al., ISBT conference 2017

# KIND: Kinetics of IroN in Donors

- Minimum donation interval 56 days
- Based on:
  - Studies from 1940s and 1950s
  - Hb levels
- Adequate for all donors?

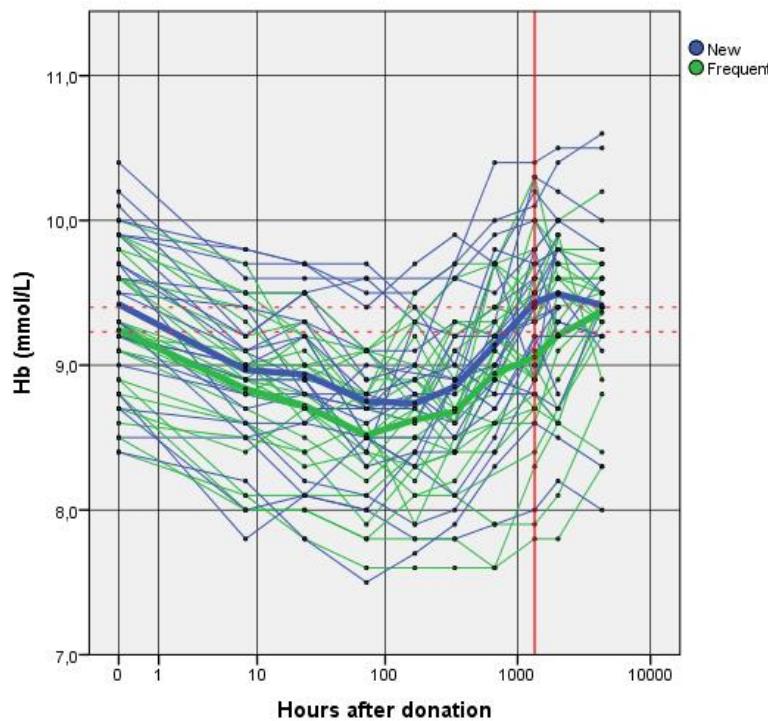

**Is the donation interval of 56 days adequate to recover from changes in iron homeostasis?**

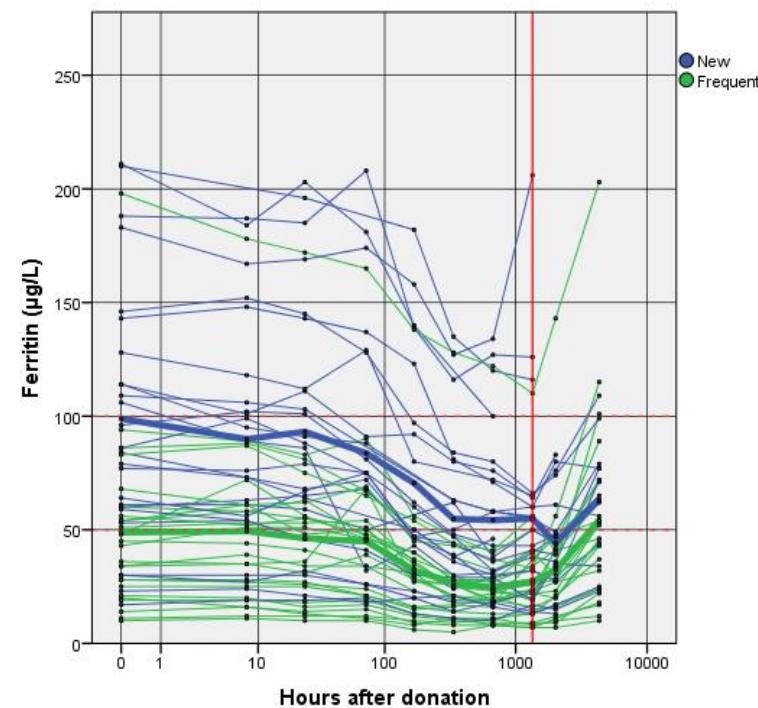

Hours	Days
0	
8	
24	Day 2
72	Day 4
168	Day 8
336	Day 15
672	Day 29
1344	Day 57
2016	Day 85
4320	Day 180

# Kinetics of IroN after Donation (KIND)

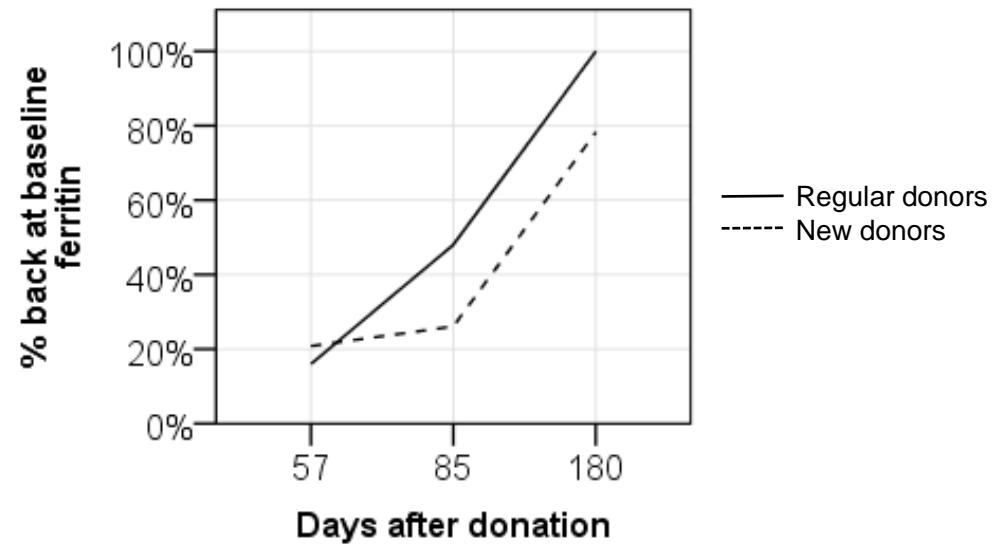

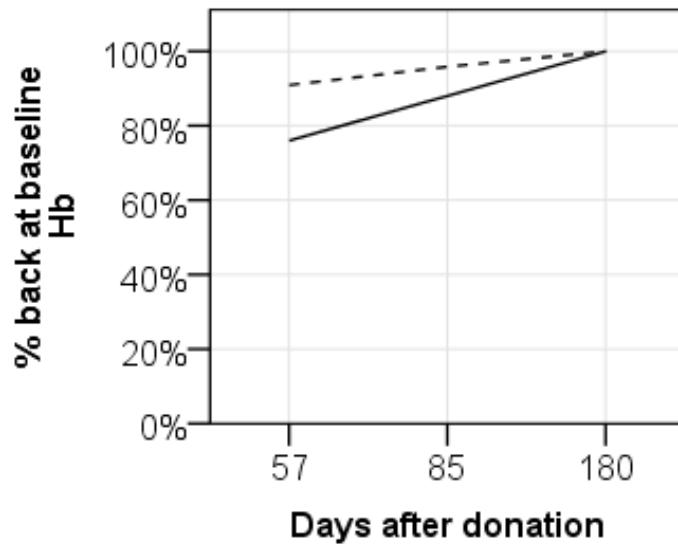

Hemoglobin

Ferritin

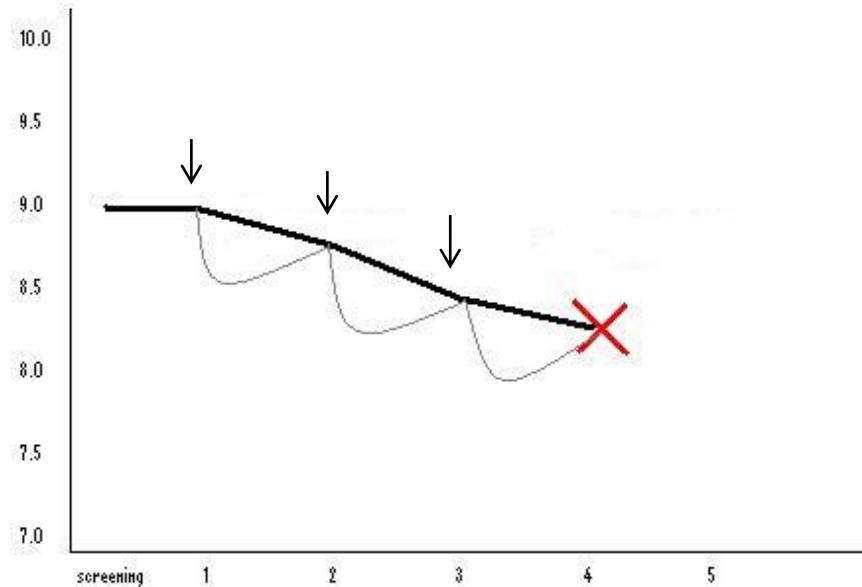

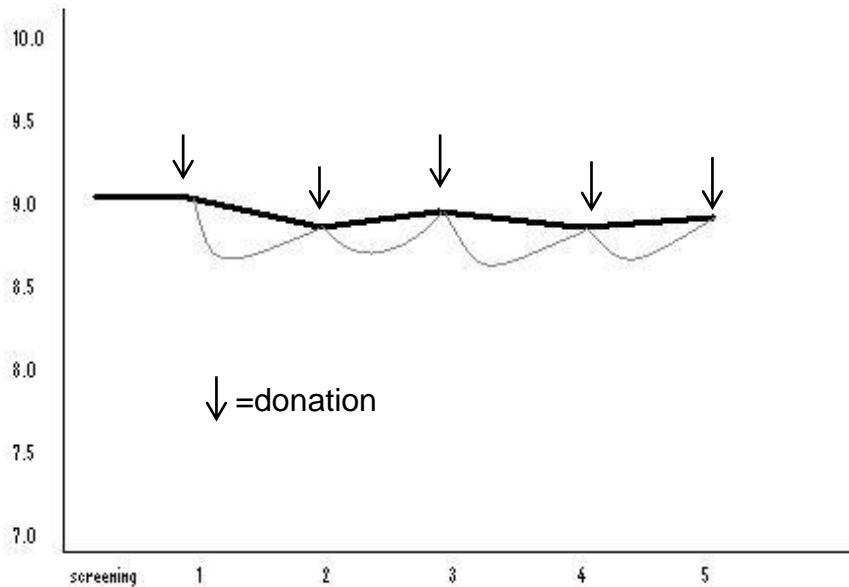

## Percentage back at baseline levels

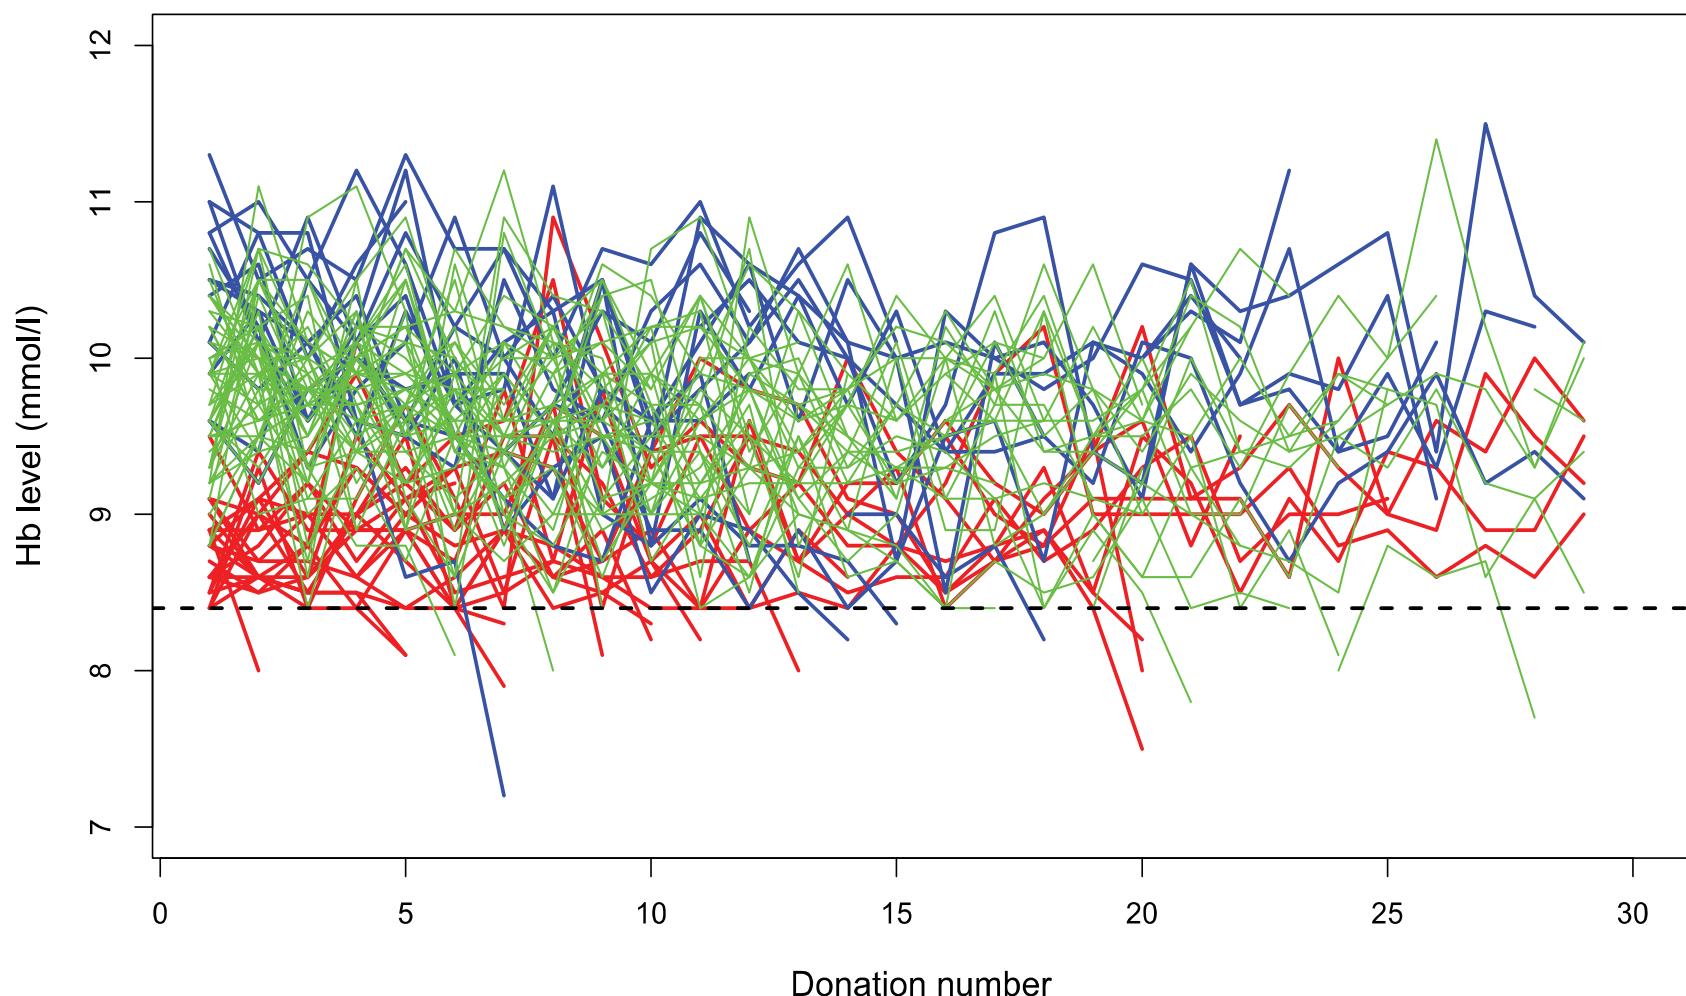

## Hb trajectories in donors

- Hemoglobin measured each donation (HemoCue)
- Hypothesis: diverse Hb trajectory after donation in donors – how come?

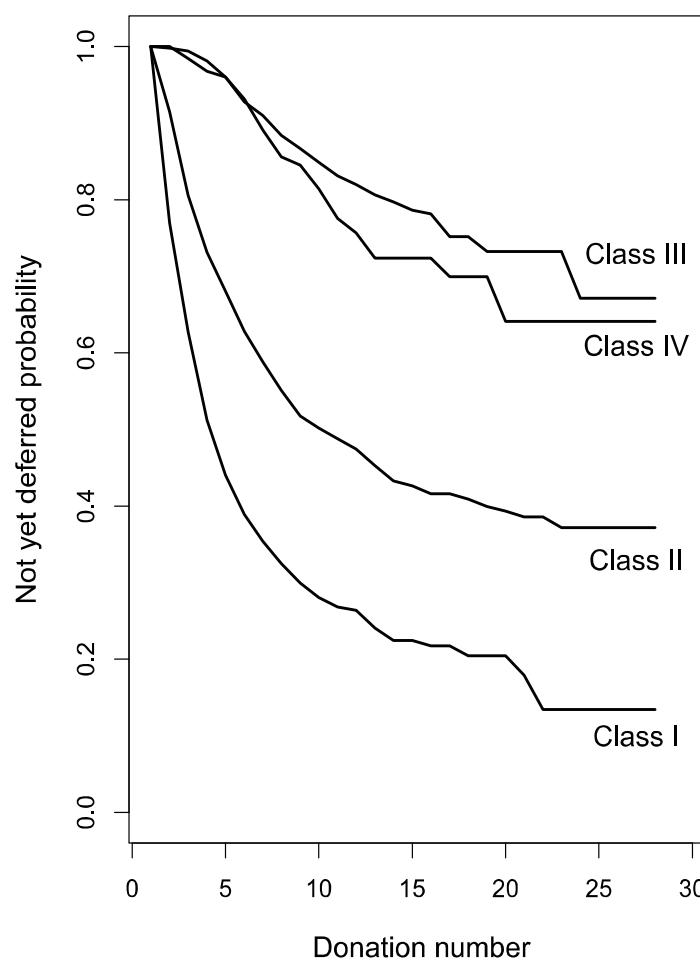

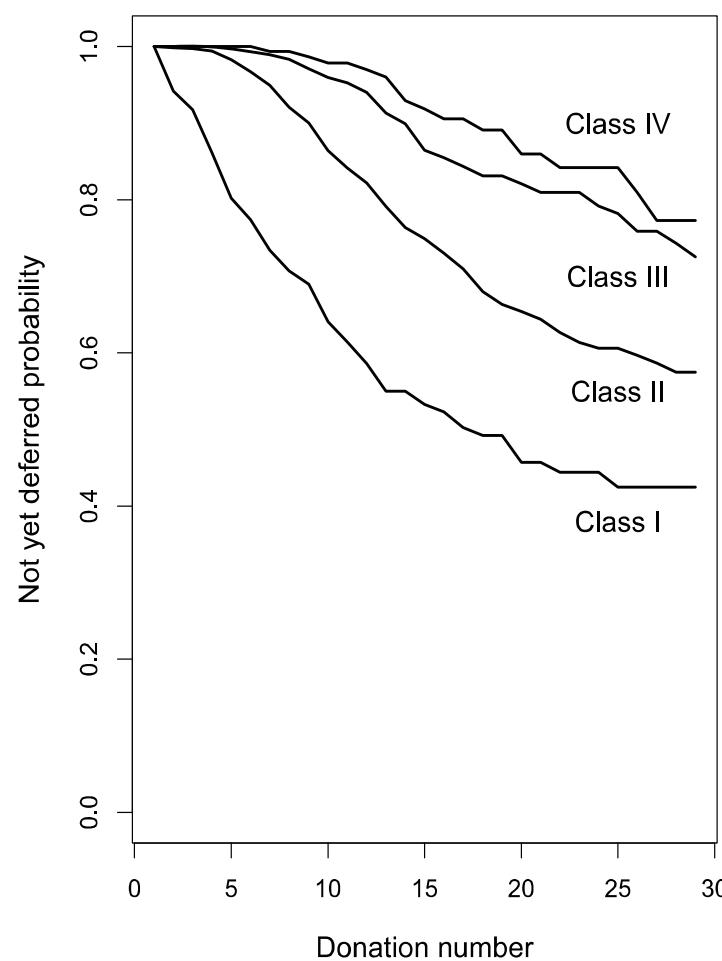

# Male Hb profiles (three groups)

Donor groups based on most similar Hb trajectory

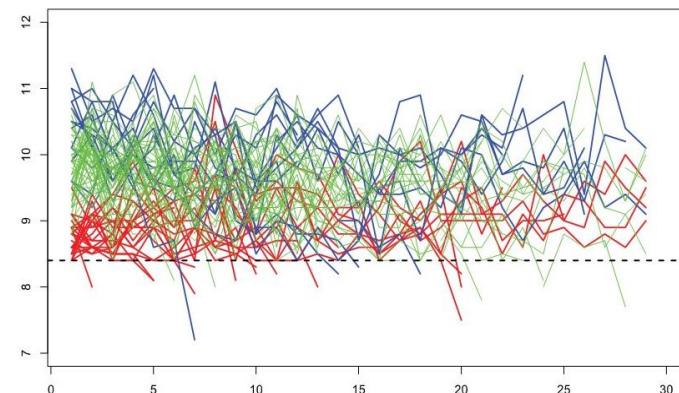

# Donors deferred proportion Kaplan-Meier curves of the latent classes

# Donor InSight (DIS)-III

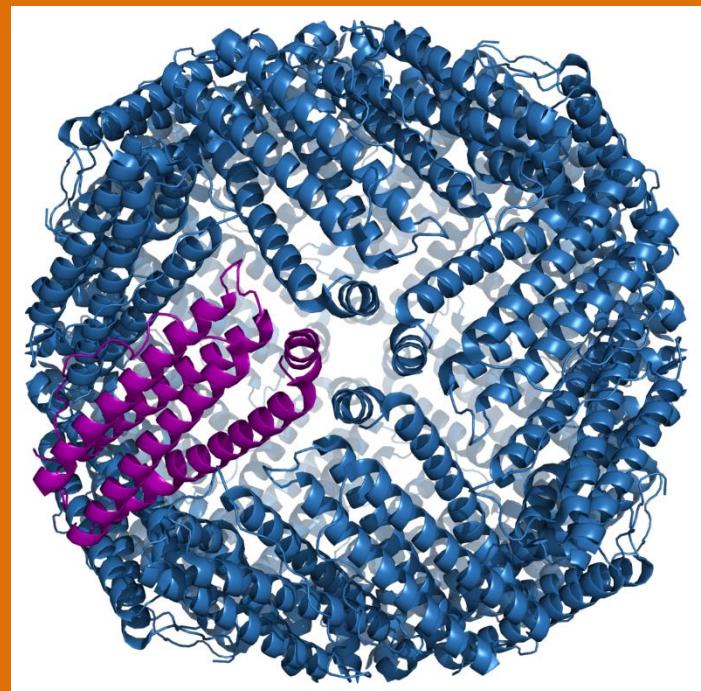

PhD project Tiffany Timmer

Aim: To identify genetic determinants of Hb trajectories  
To study symptoms of iron deficiency in donors

+ questionnaires: 3.000 donors

# Ferritin measurement in whole blood donors

# Ferritin levels in Donor InSight

## Ferritin

# Ferritin measurement in whole blood donors

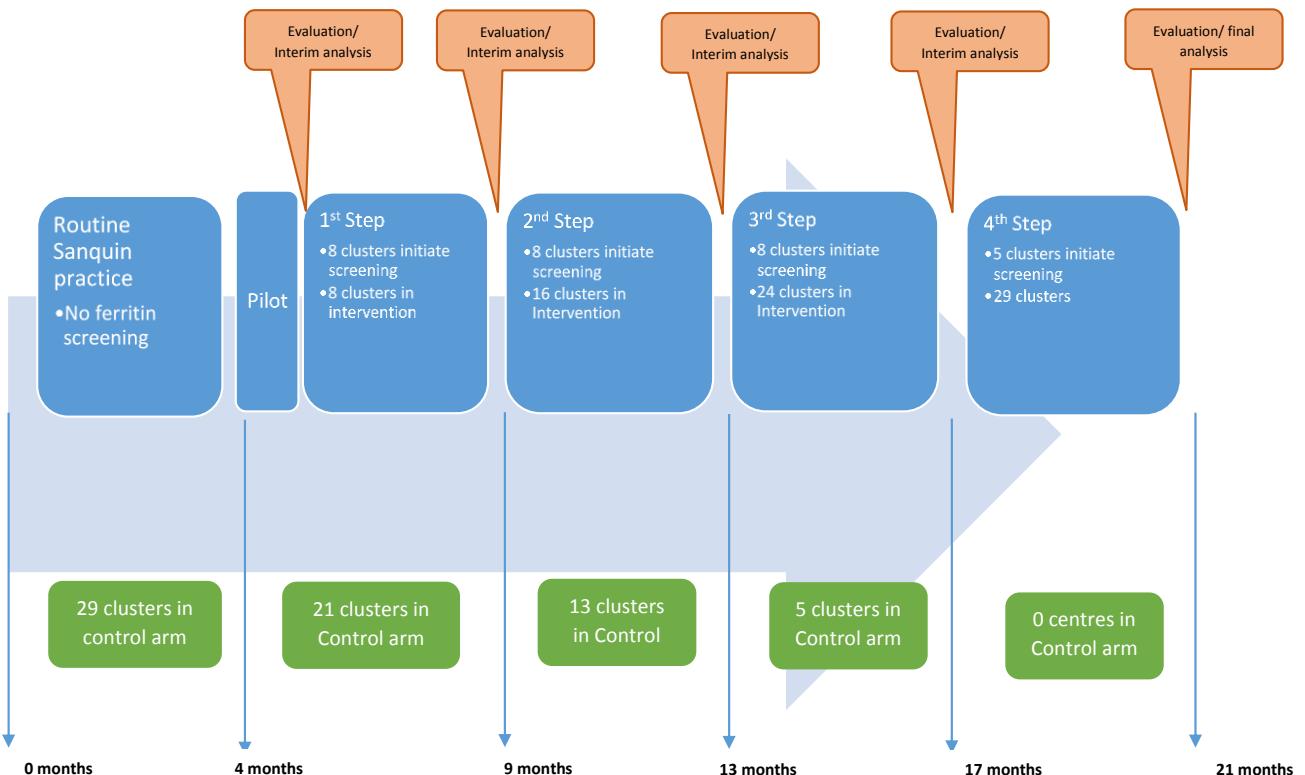

## Short-term

- Preventing iron loss in whole blood donors and untoward effects
- Lowering deferral rates for low Hb

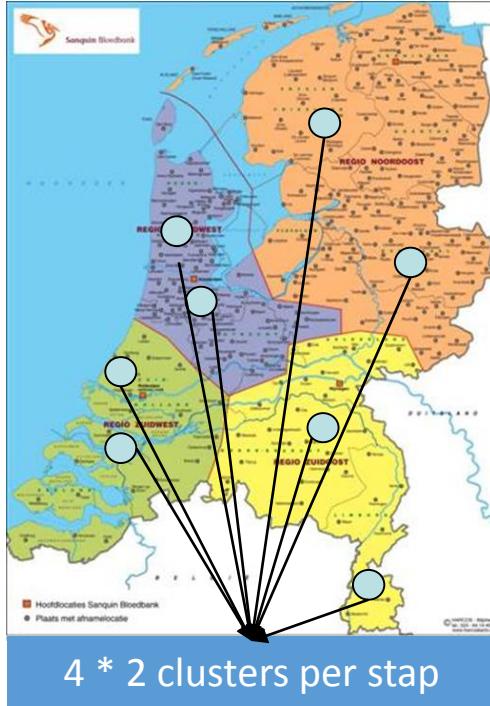

## Long-term

- Personalized intervals (based on longitudinal Hb and ferritin measurements)
- Improved donor retention

# Stepped wedge approach

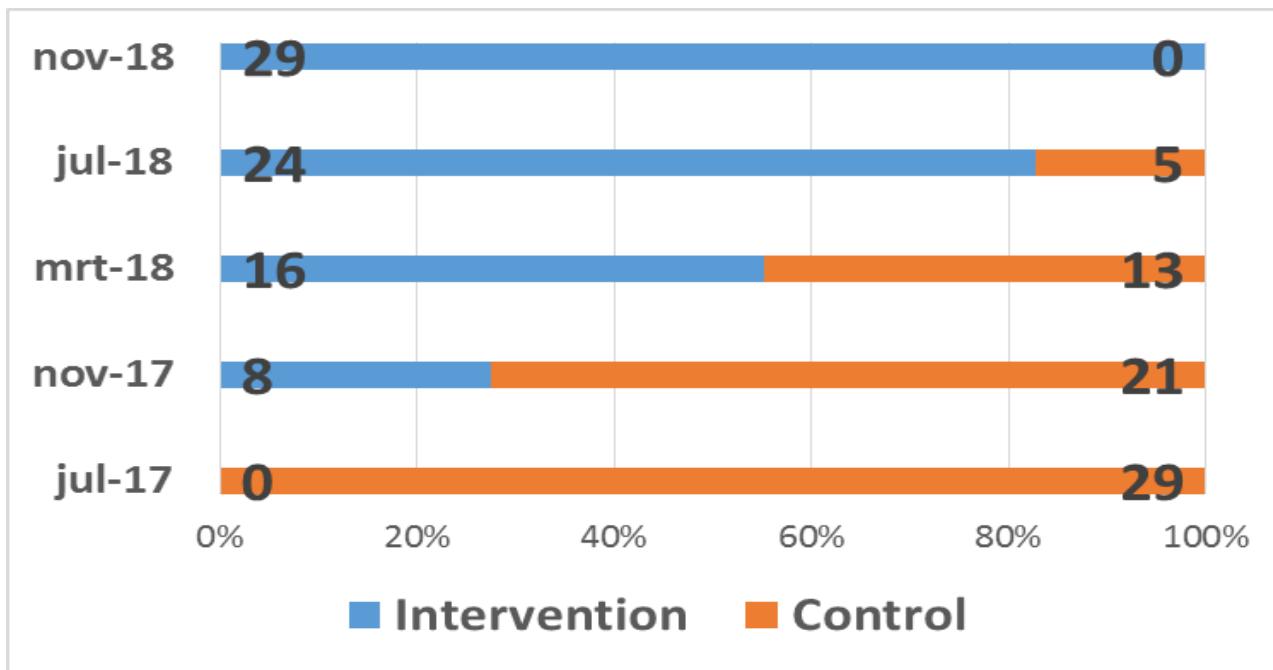

Sept 2017

# FIND'EM stepped wedge cluster-randomized trial

## Ferritin measurement IN Donors – Effectivity of iron Monitoring

### Outcomes:

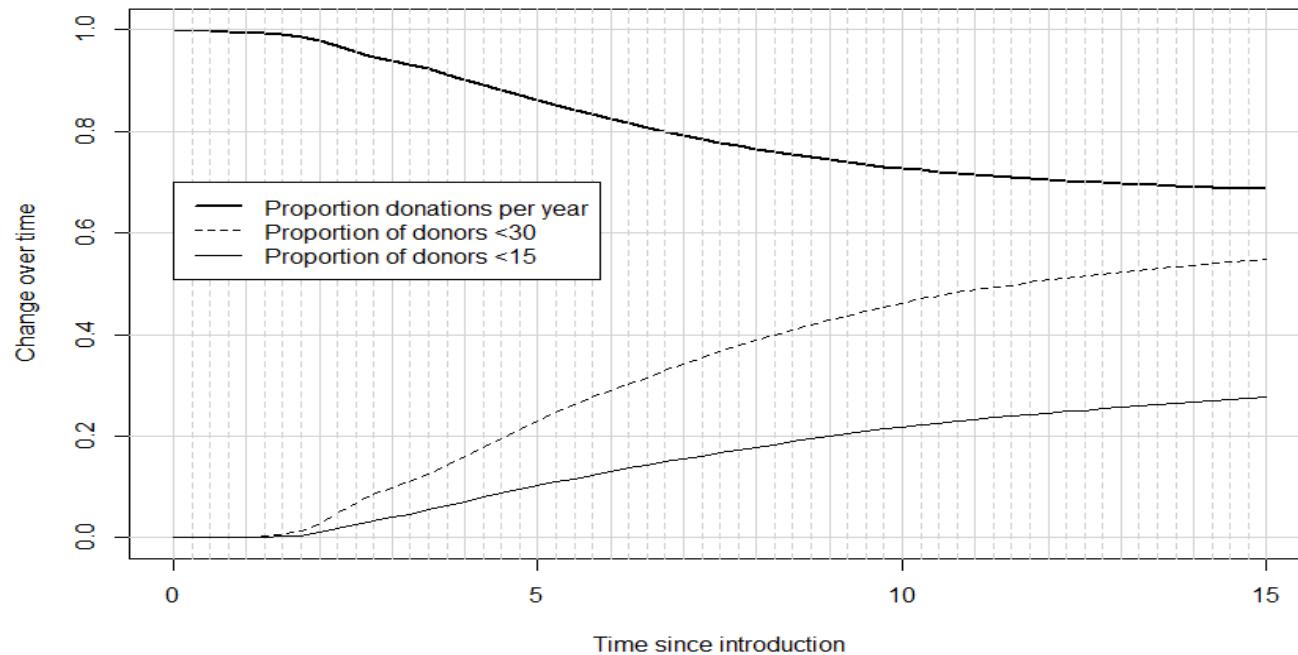

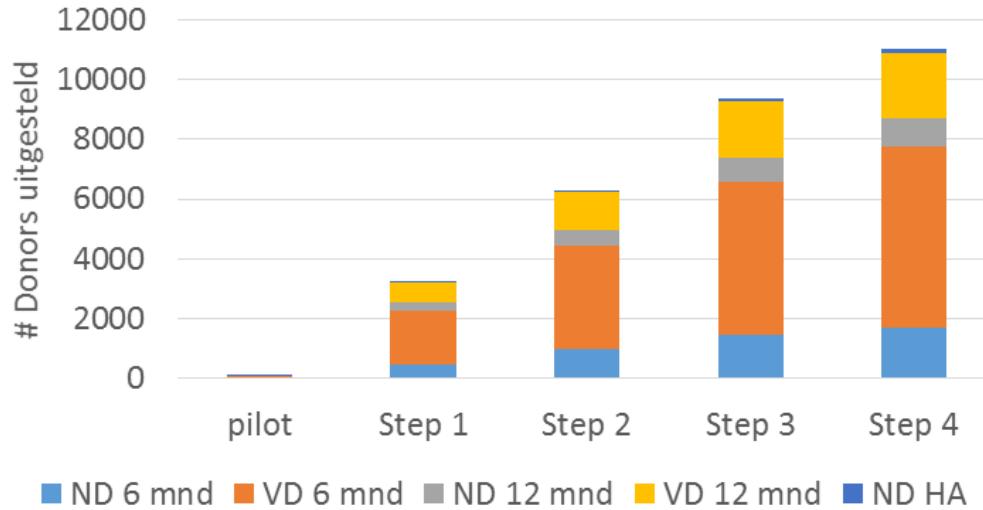

- Ferritin and Hb levels + deferral percentages
- Donor availability
- Costs

## Donor deferral thresholds

- Who tested for ferritin?
  - all new whole blood donors
  - repeat donors: every 5th donation
- When deferred?
  - ferritin  $\leq$ 15 ng/ml: 1 year
  - ferritin between 15 and 30 ng/ml: 6 months

## Loss of donors

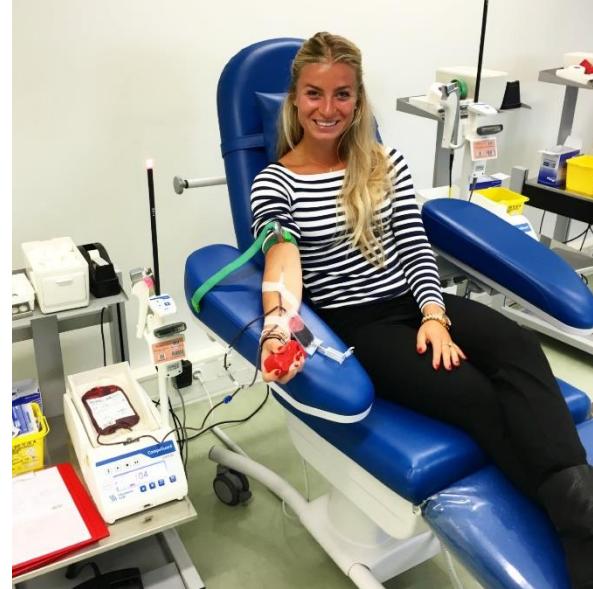

### A priori estimated deferral numbers per step

## Deferral of donors – April 2018

	New donors	Repeat donors (tested every 5th donation)	All tested donors (new + repeat)	All donors donating at included centers	8- mrt- '18	15-feb- '18	8-jan- '18	23- nov- '17	19-okt- '17
<15	4.1%	15.3%	11.8%	<b>2.7%</b>					
15-30	14.5%	33.4%	27.5%	<b>6.4%</b>

<b>Total % deferred:</b>			<b>9.1%</b>		9.4%	9.7%	9.7%	10.2%	9.8%

## Take home

Iron depletion unwanted effect of (repeated) donations:

Effectivity of ferritin-guided donation intervals currently under study.

Thank you! Merci bien!
